

## CD1010 – Swaqah Wellfield Area

Well CD1010 “SWAQA NO 3A (S 138)” in the Swaqah wellfield area is a well near a pumping center where water levels are declining steeply. This well may be a production well currently, based on its inclusion in a 2009 abstraction well database provided by MWI. The longterm decline is about -1.3 m/yr. The water level is currently declining about -9 m/yr, a trend which has remained fairly constant since 2007. The saturated thickness at CD1010 is forecast to decrease to zero in the B2/A7 aquifer by 2021. The Swaqah wellfield provides municipal supply.
